7. Green Energy Services

Our business energy consultants will listen to your energy requirements and will tailor a personal service to help your business achieve your energy goals. We supply a diverse range of businesses and have the tools and expertise to help you, whether you're a business owner, energy manager, or just looking to reduce your energy costs. Our energy consultants have expert professional knowledge to advise you on every element of your utility strategy. So, you can have peace of mind as you will be working with people who understand the opportunities and challenges your business faces.

We are providing conservation energy solution to reduce your carbon footprint. We work with your business to find ways to reduce your energy usage by designing new systems or upgrading your existing equipment. We always try to give the most cost

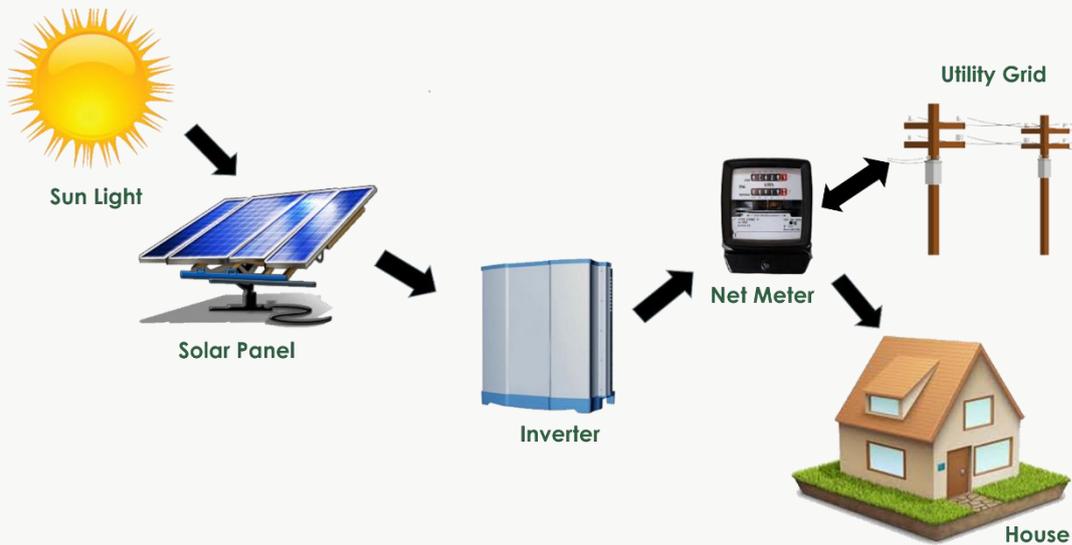

effective energy conservation solutions in areas of lighting, refrigeration, HVAC, solar, and many other technologies. We are helping you to design green offices and homes.

At Daira Sabz, everything we do is geared towards the peace of mind of our clients. We monitor everything which influences energy, weighing up historical data with future indications to best prepare, inform & to protect them from the vagaries of the market. Hence, we provide the following services:

➤ **Energy Efficiency Advice**

Should you be considering anything from solar panels to air source heat pumps we can advise and assist you to maximize the benefits.

➤ **Metering Changes**

Are you using the correct meter? We can make sure your meter suits your business.

energy can be produced from solar, hydroelectric, landfill gas, biomass, and wind energy sources. Benefits:

1. Less service disruption

Green energy services can be more reliable than traditional energy services. Green energy systems like wind and solar power are less likely to experience large-scale failure because they are distributed (spread out over a large geographical area) and modular (made up of multiple units of equipment). That means problems in one geographical area, like severe weather, or problems with one piece of equipment won't do as much to disrupt service to an entire region.

2. Creating more jobs

The growing appreciation for and technological development of green energy means that more jobs are being created in the renewable energy industry every day.

3. Lower healthcare costs

It's no secret that air and water pollution from fossil fuels can cause cancer, breathing problems, heart attacks and other serious health issues. Replacing fossil fuels with green energy sources helps reduce harmful emissions and clean up air and water quality, which improves public health and lowers overall healthcare costs.

4. A stronger economy

Green energy services do more for the community than just power homes more efficiently. Many local governments collect taxes from

renewable energy projects, which can be used to improve public services. New jobs directly created in the green energy industry create a ripple effect that benefits other related industries. Even businesses that are unrelated to the green energy industry often benefit from rising incomes across households and businesses.

5. Green energy means energy independence

Because most green energy sources (like wind, sunlight, and water) don't need to be imported, utilizing green energy helps reduce our nation's dependence on foreign imports like oil. Even more than that, by utilizing more green energy sources, many states can dramatically reduce their need to spend money importing coal and oil from across the country or from foreign countries, leading to greater energy independence.

6. Renewable energy is an inexhaustible energy source

Green energy sources are renewable, meaning they are replenished naturally and relatively quickly. Natural resources like wind, water, sunlight and geothermal heat could potentially supply the entire country's energy needs with a surplus. And unlike our finite supply of fossil fuels, renewable energy sources are inexhaustible and in continuous supply.
